

Apna Dimag Samajhna:

Psychoeducation Worksheet (Hinglish)

Naam: _____ Date: _____

1. Mere Dimag Mein Kya Ho Raha Hai?

Aapne notice kiya hoga ki kuch thoughts baar baar aapke dimag mein aate hain - aise thoughts jo disturbing, scary, ya 'galat' lagte hain. Ye thoughts ITNE real aur important lagte hain ki aapko lagta hai ki aapko kuch KARNA PADEGA unke baare mein. Toh aap kuch actions karte ho (ya dimag mein kuch sochte ho) better feel karne ke liye. Aur kaam karta hai! ...thodi der ke liye. Lekin phir woh thoughts WAPAS aa jaate hain, aksar pehle se ZYADA strong.

Yeh aapke character ya morals ki problem NAHI hai. Yeh ek PATTERN hai - aur patterns ko badla ja sakta hai.

ZAROORI BAAT: Problem thoughts NAHI hain (sabko ajeeb/scary thoughts aate hain). Problem woh CYCLE hai jo tab banta hai jab hum in thoughts ko fight ya fix karne ki koshish karte hain.

2. Woh Cycle Jo Aapko Phasa Ke Rakhta Hai

Yeh hai exactly kaise yeh pattern kaam karta hai. Is cycle ko samajhna hi PEHLA step hai isse todne ka:

STEP 1: INTRUSIVE THOUGHT (Bebulaaya Khayal)

Ek unwanted thought, image, ya urge aapke dimag mein aata hai

|
v

STEP 2: PARESHANI / ANXIETY

Intense anxiety, darr, ghin, ya doubt feel hota hai

|
v

STEP 3: COMPULSION (Ritual / Safety Behavior)

Distress kam karne ke liye kuch karte ho (checking, dhona, praying, poochna, avoid karna)

|
v

STEP 4: THODI DER KI RAHAT (Temporary Relief)

Better feel hota hai... lekin sirf kuch minutes ya ghante ke liye

|
v

STEP 5: REINFORCEMENT (Jaal)

Brain seekhta hai: 'Ritual KAAM KIYA! Agali baar phir karna padega.'

==> Thought ZYADA STRONG wapas aata hai. Cycle repeat hota hai. <==

JAAL: Compulsions LAGTE hain solution, lekin woh HAIN problem. Har baar jab aap compulsion karte ho, aap apne brain ko bol rahe ho: 'Woh thought khatarnak tha, sirf ritual ne mujhe bachaya.' Isse thought zyada baar aur zyada urgent hokar aata hai.

3. Intrusive Thoughts Ki Sachai

Yeh baat zyaadatar logon ko surprise karti hai:

FACT: Research dikhata hai ki 94% logon ko intrusive, unwanted thoughts aate hain. Violence, harm, sex, dharm ke khilaf - sab type ke thoughts. Thought AANA matlab yeh NAHI ki aap woh CHAHTE ho, ya KARENGE.

Common intrusive thoughts jo NORMAL, HEALTHY logon ko aate hain:

- 'Kya hoga agar maine kisi apne ko hurt kar diya?'
- 'Kya hoga agar gas/stove on reh gaya?'
- 'Kya main ganda/contaminated ho gaya?'
- 'Kya is thought ka matlab hai ki main bura insaan hoon?'
- 'Kya hoga agar maine kuch offensive bol diya ho?'
- 'Kya hoga agar maine apna control kho diya?'
- 'Kya Bhagwan/Allah mujhse naraz hai?'

Is problem wale insaan aur bina problem wale insaan mein FARK thoughts ka content NAHI hai. Fark hai:

1. Aap thought ko kitni IMPORTANCE dete ho ('Is thought ka kuch matlab zaroor hai!')
2. Aap kitna thought ko CONTROL karne ki koshish karte ho (jo use aur zyada laata hai)
3. Aap COMPULSIONS karte ho ya nahi response mein (jo cycle ko feed karta hai)

ACCHI BAAT: Problem thought ke RESPONSE mein hai (thought mein nahi), toh hum response badal sakte hain. Yahi hum saath mein karenge.

4. Compulsions: Dikhne Wale AUR Na Dikhne Wale

Zyaadatar log sochte hain compulsions sirf dikhne wale actions hain (haath dhona, lock check karna). Lekin BOHOT saare compulsions DIMAG KE ANDAR hote hain. Yeh utne hi powerful hain aapko stuck rakhne mein.

Dikhne Wale Compulsions	Na Dikhne Wale (Mental) Compulsions
Baar baar haath dhona	Dimag mein events review karna ki kuch bura nahi hua
Locks, stove, switches check karna	Chupchap pray/count karna thought 'cancel' karne ke liye
Cheezein 'perfectly' arrange karna	'Bure' thought ko 'achche' thought se replace karna
Doosron se reassurance maangna	Analyze karna: 'Kya main sacchi mein bura hoon?'
Logon/jagahon/cheezon se bachna	Dimag mein thought se argue karna
Baar baar padhna/likhna	100% certainty dhoondhne ki koshish karna dimag mein

YAAD RAKHEIN: Avoidance (bachna) bhi ek compulsion hai. Jab aap kisi insaan, jagah, ya situation se iss liye bachte ho ki woh trigger kar sakta hai, toh aap brain ko bol rahe ho threat REAL hai. Isse cycle aur MAZBOOT hota hai.

5. Raasta: Andar Se Guzarna, Aas-Paas Se Nahi

Agar compulsions aur avoidance problem ko FEED karte hain, toh solution kya hai?

Jawab hai seekhna:

1. Thought ko REHNE DENA (bina fight ya push kiye)
2. Discomfort FEEL KARNA (bina jaldi se hatane ki koshish ke)
3. Compulsion NA KARNA (chahe aapka har hissa karna chahta ho)
4. DISCOVER KARNA ki anxiety APNE AAP kam hoti hai (bina ritual ke)

Isko kehte hain 'discomfort ke saath baithna' - aur yeh sabse powerful cheez hai jo aap kar sakte ho. Jab aap compulsion NAHI karte, toh brain eventually seekhta hai: 'Oh, kuch bura hua hi nahi. Shayad mujhe ritual ki zaroorat hi nahi thi.'

Hum AAJKE SESSION mein yeh process START NAHI karenge. Aaj SAMAJHNE ke baare mein hai. Agle sessions mein, hum ek step-by-step plan banayenge (aasaan situations se shuru karke) is naye tarike se respond karne ki practice ke liye. Aapko kabhi bhi bina tayyari ke kuch nahi karne ko bola jayega.

YAAD RAKHEIN: Aap thoughts ROKNE ki koshish nahi kar rahe. Aap thoughts ke saath apna RISHTA badal rahe ho. Thoughts apni power kho dete hain jab aap unhe compulsions se feed karna band kar dete ho.

6. Aaj Ki Key Learnings

- ☐ Intrusive thoughts SABKO aate hain - inke hone se main bura ya khatarnak NAHI hoon
- ☐ Problem THOUGHT nahi hai - problem thought ke baad ki COMPULSIVE RESPONSE hai
- ☐ Compulsions SHORT-TERM mein rahat deti hain lekin LONG-TERM mein cheezein BADTAR karti hain
- ☐ Mental compulsions (reviewing, analyzing, praying to neutralize) bhi utni hi problematic hain
- ☐ Avoidance bhi ek compulsion hai - yeh brain ko bolta hai threat REAL hai
- ☐ Raasta discomfort ke ANDAR se hai, AASPAAS se nahi
- ☐ Hum DHEERE DHEERE kaam karenge - main kabhi directly deep end mein nahi phenka jaunga

Mere sawaal therapist ke liye:
