

VINELAND SOCIAL MATURITY SCALE

Indian Adaptation by Dr. A.J. Malin

The Vineland Social Maturity Scale (VSMS) measures the differential social capacities of an individual. It provides an estimate of Social Age (SA) and Social Quotient (SQ), and shows high correlation (0.80) with intelligence. It is designed to measure social maturation in eight social areas: Self-help General (SHG), Self-help Eating (SHE), Self-help Dressing (SHD), Self direction (SD), Occupation (OCC), Communication (COM), Locomotion (LOM), and Socialization (SOC). The scale consists of 89 test items grouped into year levels. For details of the complete VSMS one should refer to VSMS manual. VSMS can be used for the age group of 0-15 years.

The examiner should collect information on VSMS test items regarding child's abilities through direct observation and supplement it by interviewing the mother.

Recording

Use Record Sheet for noting the child's responses. Mark the item pass (✓) if the child is able to perform correct and fail (✗) if otherwise. Half credits may be given if it can be presumed that the child could have passed the item if the opportunity was present. These half credits receive full credit if they lie between two passed items.

Scoring

Add up passed scores (full and half). Find out the Social Age (SA) from Appendix-11 of VSMS manual. Compute Social Quotient (SQ) by dividing SA by CA and multiplying by 100. Assess maturity levels both in terms of SA and SQ for each of the eight social areas by referring VSMS norms and enter in the columns of social maturity constellation record.
