INTRODUCTION TO VSMS

VINELAND SOCIAL MATURITY SCALE

VISUAL GUIDE MANUAL

The Vineland Social Maturity Scale (VSMS) is designed to assess the level of social maturity and adaptive behaviour in individuals across the developmental lifespan. It evaluates how effectively a person meets the demands of everyday life in the home, school and community.

**89
ITEMS**

From infancy
to adolescence

THE 8 DOMAINS OF VSMS

1. SHG

SELF-HELP GENERAL

General independence in basic personal and everyday activities.

2. SHE

SELF-HELP EATING

Skills related to feeding, drinking and meal-related activities.

3. SHD

SELF-HELP DRESSING

Abilities related to dressing, grooming, bathing and personal care.

4. SD

SELF-DIRECTION

Independent decision-making, responsibility, judgment and self-management.

5. OCC

OCCUPATION

Purposeful activities, play, household tasks, creative and productive work.

6. COM

COMMUNICATION

Understanding and expression through speech, reading, writing and related skills.

7. LOC

LOCOMOTION

Independent movement and mobility within the home, neighbourhood and community.

8. SOC

SOCIALIZATION

Social interaction, peer relationships, group participation and socially appropriate behaviour.

WHAT VSMS PROVIDES

Social Age / Maturity Age
indicating the level of social maturity.

Social Quotient (SQ)
reflecting the individual's social adaptation in comparison to peers.

USES OF VSMS

- ✓ Developmental assessment
- ✓ Clinical evaluation
- ✓ Disability assessment
- ✓ Rehabilitation planning
- ✓ Educational planning
- ✓ Monitoring progress

BASIS

Based on observable behaviours and information from parents, caregivers, teachers or other informants.

“Understanding social maturity helps us support individuals to live more independent, confident and meaningful lives.”

Dr. Raheemudheen P.K.
Clinical Psychologist

 2 - 3 YEARS		
35.	Signals to go to toilet	☐
36.	Initiates own play activities	☐
37.	Removes shirt or frock if un-buttoned	☐
38.	Eats with spoon/hands (food)	☐
39.	Gets drink (water) unassisted	☐
40.	Dries own hands	☐
41.	Avoids simple hazards	☐
42.	Puts on shirt or frock unassisted (need not button)	☐
43.	Can do paper folding	☐
44.	Relates experiences	☐
 3 - 4 YEARS		
45.	Walks downstairs, one step at a time	☐
46.	Plays co-operatively at kindergarten level	☐
47.	Buttons shirt or frock	☐
48.	Helps at little household tasks	☐
49.	"Performs" for others	☐
50.	Washes hands unaided	☐
 4 - 5 YEARS		
51.	Cares for self at toilet	☐
52.	Washes face unassisted	☐
53.	Goes about neighbourhood un-attended	☐
54.	Dresses self except for tying	☐
55.	Uses pencil or crayon or chalk for drawing	☐
56.	Plays competitive exercise games	☐
 5 - 6 YEARS		
57.	Uses hoops, flies kites, or uses knife	☐
58.	Prints (writes) simple words	☐
59.	Plays simple games which require taking turns	☐
60.	Is trusted with money	☐
61.	Goes to school unattended	☐
 6 - 7 YEARS		
62.	Mixes rice "properly" unassisted	☐
63.	Uses pencil or chalk for writing	☐
64.	Bathes self assisted	☐
65.	Goes to bed unassisted	☐

★ Note: Mark ✓ in the box if the item is observed / achieved.

VSMS

VINELAND SOCIAL MATURITY SCALE

ADMINISTRATION

VSMS is administered primarily through a structured interview with a reliable informant, supported by observation and demonstration.

1

NATURE OF ADMINISTRATION

- Based on clinical interview, behavioural observation and demonstration.
- Assesses what the individual actually does in everyday life.

2

SELECTION OF INFORMANT

- Choose a person who knows the individual well.
- Should have regular interaction and adequate knowledge.
- Usually a parent, primary caregiver or family member.

3

PRESENCE OF THE CHILD / INDIVIDUAL

- Having the individual present is preferable.
- Allows verification, clarification and direct observation.
- Demonstration of tasks may be requested when needed.

4

ESTABLISHING CHRONOLOGICAL AGE

- Calculate Chronological Age (CA) from date of birth.
- Preferably convert age into months.

Formula

$CA = (\text{Years} \times 12) + \text{Months}$

Example: 8 years 6 months = 102 months

5

STARTING POINT

- Begin approximately two years below the individual's chronological age.
- For significant delay, start at a much lower developmental level.

6

SERIAL VS. DOMAIN-WISE ADMINISTRATION

- Items may be examined in order, but domain-wise approach is often more useful.
- Helps explore related behaviours together and identify inconsistencies better.

7

HOW TO ASK ABOUT AN ITEM

- Do not ask only "Can he do this?"
- Use probes: How often? Independently? Needs help? When last observed?
- Distinguish ability from willingness or motivation.

8

CULTURAL AND ENVIRONMENTAL OPPORTUNITY

- Some items depend on opportunities available (e.g., going out alone, shopping, using money).
- Failure may be due to lack of opportunity, not inability.
- Document environmental and cultural factors affecting behaviour.

9

DISCONTINUATION

- A useful guideline is about three failures within the same domain.
- Do not stop mechanically.
- Continue to establish the actual upper level of functioning.

10

GENERAL PRINCIPLES

- Evaluate ability, not just performance.
- Provide adequate opportunity.
- Use observation and demonstration whenever possible.
- Consider physical, sensory and emotional factors.
- Record examples to support scoring.

REMEMBER

VSMS reflects social maturity and adaptive behaviour.
It is a guide for intervention planning and not a measure of intelligence.

Dr. Raheemudheen P.K.
Clinical Psychologist

VSMS

VINELAND SOCIAL MATURITY SCALE

SCORING

Scoring in VSMS helps to determine the Social Age (Maturity Age) and Social Quotient (SQ) reflecting the individual's level of social and adaptive functioning.

1 BASIC ITEM SCORING

Each item is scored based on the individual's ability to perform the behaviour as intended in the item.

FULL CREDIT
(1)

The individual can perform the behaviour satisfactorily and independently.

HALF CREDIT
(1/2)

The individual has the underlying ability partially, or has not had adequate opportunity to demonstrate it.

NO CREDIT
(0)

The individual does not possess or demonstrate the required ability.

i Use half credit judiciously. It is not to be used to inflate the score.

2 DEVELOPMENTAL CREDIT PER ITEM

Each age level contains a different number of items.

Each passed item carries an age credit (in months) as shown below.

AGE LEVEL	NO. OF ITEMS	AGE CREDIT PER ITEM
0 – 1 year	17	0.7 month
1 – 2 years	17	0.7 month
2 – 3 years	10	1.2 months
3 – 4 years	6	2.0 months
4 – 5 years	6	2.0 months
5 – 6 years	5	2.4 months
6 – 7 years	4	3.0 months
7 – 8 years	5	2.4 months
8 – 9 years	4	3.0 months
9 – 10 years	3	4.0 months
10 – 11 years	4	3.0 months
11 – 12 years	3	4.0 months
12 – 15 years	5	7.2 months

i Indian VSMS norms are applicable up to 15 years (180 months).

3 CALCULATING SOCIAL AGE (MATURITY AGE)

Social Age (SA) is the developmental age level corresponding to the behaviours the individual successfully performs.

Step 1

Give full / half / no credit to each item.

Step 2

For each age level, count the total credit earned (using 1, 1/2 or 0).

Step 3

Multiply the credits by the Age Credit per Item for that age level (from the table above).

Step 4

Add the age credits across all age levels to obtain the Social Age (in months).

Step 5

Convert months into years and months.

4 WORKED EXAMPLE

Chronological Age (CA): 8 years 6 months

CA in months = (8 × 12) + 6 = 102 months

AGE LEVEL	ITEMS PASSED	AGE CREDIT PER ITEM	AGE CREDIT EARNED (MONTHS)
0 – 1 year	All 17	0.7	17 × 0.7 = 11.9
1 – 2 years	All 17	0.7	17 × 0.7 = 11.9
2 – 3 years	All 10	1.2	10 × 1.2 = 12.0
3 – 4 years	All 6	2.0	6 × 2.0 = 12.0
4 – 5 years	All 6	2.0	6 × 2.0 = 12.0
5 – 6 years	4 out of 5	2.4	4 × 2.4 = 9.6

Total Age Credit Earned = 11.9 + 11.9 + 12 + 12 + 12 + 9.6 = 69.4 months

Social Age (SA) = 69.4 months ≈ 5 years 9 months

5 CALCULATING SOCIAL QUOTIENT (SQ)

$$SQ = \frac{\text{Social Age (in months)}}{\text{Chronological Age (in months)}} \times 100$$

Example (from above) SA = 69.4 months
CA = 102 months

$$SQ = \frac{69.4}{102} \times 100 = 67.8$$

SQ ≈ 68

6 SUMMARY OF SCORES

Chronological Age (CA)

Actual age of the individual in months.

Social Age (SA)

Developmental age level obtained from VSMS (in months).

Social Quotient (SQ)

Indicates the individual's social maturity in comparison to chronological age.

7 DOMAIN PROFILE SCORING

Plot the highest age level achieved in each of the 8 domains separately.

This helps to identify strengths, weaknesses and areas needing support.

8 IMPORTANT NOTES

- ✓ Use months (not decimal years) for accurate calculations.
- ✓ Consider opportunity, environment and physical limitations before giving 'No Credit'.
- ✓ SQ is not the same as IQ.
- ✓ Interpret results along with clinical, developmental and contextual information.
- ✓ VSMS scores guide intervention planning and support development of functional skills.

Quick Formula Reminder

CA (months) = (Years × 12) + Months

SA = Sum of Age Credits (in months)

SQ = SA / CA × 100

Accurate scoring leads to meaningful understanding and effective intervention.

Dr. Raheemudheen P.K.
Clinical Psychologist

VSMS

VINELAND SOCIAL MATURITY SCALE

PROFILE ANALYSIS & INTERPRETATION

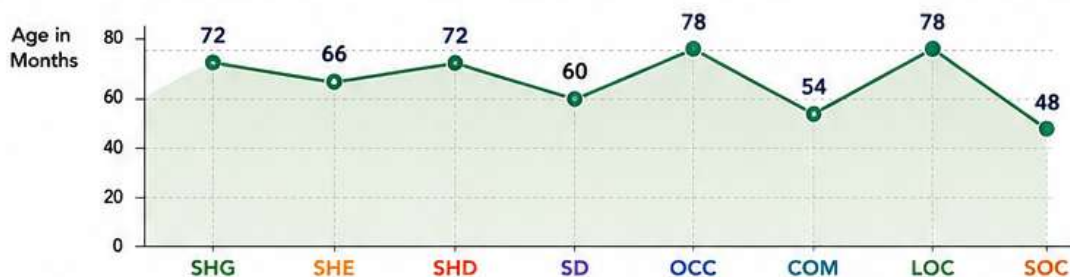

VSMS profile analysis helps us understand the individual's strengths and areas of difficulty across the 8 domains of social and adaptive behaviour and plan appropriate intervention.

1 DOMAIN-WISE PROFILE CHART

Record the highest age level achieved in each domain.

Domains	SHG Self-Help General	SHE Self-Help Eating	SHD Self-Help Dressing	SD Self-Direction	OCC Occupation	COM Communication	LOC Locomotion	SOC Socialization
Domain Code	SHG	SHE	SHD	SD	OCC	COM	LOC	SOC
Highest Age Level Achieved (Years:Months)	6 : 0	5 : 6	6 : 0	5 : 0	6 : 6	4 : 6	6 : 6	4 : 0
Age in Months	72	66	72	60	78	54	78	48

How to Read the Profile Graph

- Higher points indicate better social maturity in that domain.
- Lower points indicate areas of relative difficulty.

2 OVERALL SUMMARY

	Chronological Age (CA)	8 years 0 months (96 months)
	Social Age (SA)	5 years 6 months (66 months)
	Social Quotient (SQ)	69
	Interpretation	Below average social maturity

3 DOMAIN-WISE INTERPRETATION GUIDE

Level	Description
Strength Area (Above Average)	Age level is comparable to or higher than chronological age. Use as a strength in planning.
Average Area (Age Appropriate)	Age level is slightly below or close to chronological age. Continue to support and monitor.
Mild Concern (Below Average)	Age level is moderately below chronological age. Needs focused attention and training.
Significant Concern (Much Below Average)	Age level is far below chronological age. Requires intensive intervention and support.

4 IDENTIFYING STRENGTHS & AREAS OF DIFFICULTY

Strengths (Relative)

- Occupation (5y 6m) – good involvement in age-appropriate activities.
- Locomotion (5y 6m) – moves independently in most situations.

Areas of Difficulty (Need Support)

- Socialization (4y 0m) – difficulty in peer interaction and group participation.
- Communication (4y 6m) – needs support in expressing experiences and understanding complex language.
- Self-Direction (5y 0m) – needs help in decision making, responsibility and managing tasks.

Focus on activities to improve weaker areas while maintaining strengths.

5 INTERPRETATION IN CONTEXT

VSMS interpretation should always be integrated with clinical interview, observation, history and other assessment results.

6 CLINICAL USE

VSMS results may be used for:

- ✓ Developmental assessment
- ✓ Disability evaluation
- ✓ Educational planning
- ✓ Rehabilitation planning
- ✓ Monitoring progress
- ✓ Documentation & reporting

IMPORTANT REMINDERS

- SA and SQ are indicators of social maturity, not IQ.
- Interpret with caution in the presence of physical, sensory or medical conditions.
- Consider opportunity, motivation and environment.

Dr. Raheemudheen P.K.
Clinical Psychologist

VSMS – PROFILE ANALYSIS CHART

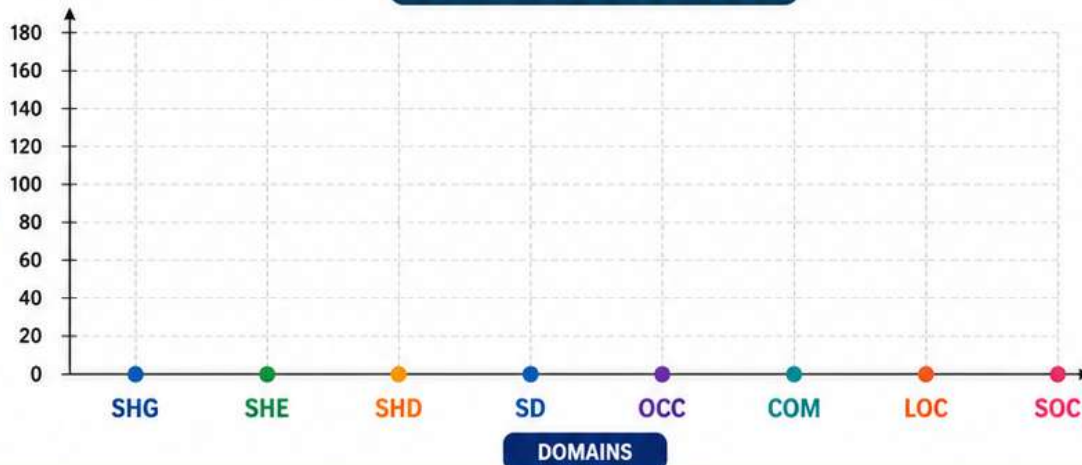

(Vinland Social Maturity Scale)

DOMAIN PROFILE GRAPH

HOW TO USE

1. Find the Social Age for each domain from the VSMS Profile (norms chart).
2. Plot the corresponding social age (in months) on the graph.
3. Join the points to obtain the profile line.
4. Lower points indicate areas needing more support.

OVERALL SUMMARY

 Chronological Age : _____ Years _____ Months

 Overall Social Age (SA) : _____ Years _____ Months

 Social Quotient (SQ) : _____

$$SQ = \frac{\text{Overall Social Age (in months)}}{\text{Chronological Age (in months)}} \times 100$$
